

Recyclecleaner

The Recyclecleaner is a portable, multifunctional, water recycling, vacuum pressure washer. It combines a powerful high pressure pump (1500 psi) with a staged vacuum recovery system. It can be used with absolute confidence where run-off water, overspray and mist generated by normal high pressure cleaning are not acceptable. The pump is self priming and can draw water from its own 20 litre reservoir with out the need of a separate water supply.

Filter socks and cartridges can be washed and reused or optional disposable filter socks are available. The Recyclecleaner has been designed to be compact and easily moved by just one person. Cleaning tile & grout areas including all hard floor surfaces can now done quickly without chemicals. Simply fill the water bucket add a sanitiser if required plug into a standard 240 volt power supply and clean tile floors at up to 100 square metres per hour.

The specially designed tools will allow cleaning of the tightest areas including all corners and floor to ceiling lines. An edging tool allows cleaning around fixtures and even steps. Use the Recyclecleaner daily or for your deep cleaning schedules, it is simply the best solution for all your hard floor cleaning needs.
