

Super Dragin™ 357

This pneumatic powered drum is designed to vacuum up waste machine tool oils, hydraulic oil, lubricating oil, sump oil, clean out ship bilges, vacuum up soup/liquid food waste, cooking oils, as well as sludge & metal chip suspended in fluid, EDM fluids, transformer oils, in fact any fluid that is viscous & will flow.

Super Dragin™ 357 has been in production since 1988 and this new design is patented in Australia & New Zealand, the original model has been sold in 26 countries around the world, often copied but never matched. Dragin 357 has the highest vacuum/air flow ration and economy of compressed air usage in the global market & can operate with as little as 60 psi at 9.7 scfm it is basically a maintenance free tool as no fluid moves through the pump.

Simply connect the Dragin 357 to the 3/4" drum plug on a 205 or 60 litre drum, the connect the enclosed hose kit to the 2" drum plug, connect your compressed air supply. It is so fast (it can fill a drum with water in a minute and six seconds) you will be amazed at the speed & simplicity of use, the chrom float valve (we created the original design in 1988) will shut off the flow when the drum is full, at which point the Dragin 357 & hose kit can be removed, the drum capped labeled & sent off for disposal, job done!
