

Super Dragin™ Magnum Series

The Magnum Series Super Dragin™ Pumps SDM 35 - 48 and 75 are designed for high airflow, high vacuum & wet vacuuming, by example the Magnum Series is capable of vacuuming up molten tar, heavy sludge or viscous spill control.

All of the Magnum Series are designed to screw into one steel drum or purpose built closed container, ideally a smooth bore vacuum hose should be fitted to the second drum port along with a suitable vacuum wand, for end users we have available 205 litre bin lids fitted with 2 x 50mm (2") ports.

SDM - 75 requires a compressed air supply of 75 scfm (2, 122.5 L/min) at 100 psi (7 bar), This Model pump is fitted with a large silencer and high airflow chrome float valve. Likewise SDM - 35 requires 35 scfm at 7 bar and SDM - 48 requires 48 scfm at 7 bar.

Manufactured in Australia since 1989, Dragin Pumps have been exported to some 26 global countries & are currently used in such applications as Haz Mat emergency vehicles, Offshore Oil Rigs, Tar spraying trucks (product loading), Mining Vehicle wash down fluid recovery, Vacuuming priming irrigation pumps, Vacuum loading tanks, Shipping bilge clean out.
