

Insulation Vacuum Loader

3 YEAR ENGINE WARRANTY FROM KOLHER

LARGE HI PRESSURE STEEL FAN

18HP KOHLER ENGINE KEY START

Remove old cellulose insulation from ceiling spaces with our Insulation vacuum loader through fan vacuum system. Using a large diameter 5-inch vacuum hose this machine will rapidly remove cellulose insulation in a fraction of the time compared with manual bagging methods.

Cellulose and Rockwool fiber insulation removal is vacuumed via the machine's solid steel constructed 6mm thick 500mm impeller. The material is vacuumed and directed to the exit trunking and into the 400-litre collection bag, waste material can also be blown into a caged/ shade-cloth lined trailer.

Powered by a V twin 18hp petrol engine with adjustable engine speed, this unit is an extremely reliable and rugged contractor-grade machine. As a rapid recovery machine, it is perfect for fast and reliable blow-in ceiling insulation removal.
